

## Audionamix Professional Services for Labels and Rights Holders

### Untapped Possibilities

Getting the most out of your recordings has never been easier with Audionamix AI music stemming technology. With our proprietary AI algorithms, you have the power to create new stems from the master recording - no multitrack required. These AI assets mean new opportunities to rerelease and reimagine content and generate substantial revenue

### Benefits of AI Separation for Music

Multitrack sound recordings are not always readily available or accessible, significantly limiting the revenue potential of your catalogue. With AI separation you have power to unlock your archive, creating new opportunities and untapped revenue streams across label departments.

- Generate backing tracks and vocal isolations, automatically and at scale.
- Leverage and maximize your existing catalog through UGC apps TikTok, Triller, Twitch, IG to create never-before-heard, personalized listening experiences using stems.
- Re-release classic recordings with new production techniques, or upmix in Atmos and surround sound formats.
- Allow your roster artists to collaborate across time with beloved artist performances and create new products from existing songs.

### Past Projects

For years, Audionamix Professional Services has connected this innovative separation technology with the music industry. Below are a few of the projects we've had the opportunity to bring to life.

#### Barry Manilow - "My Dreams Due"

Project Type: Vocal Extraction

Barry takes the opportunity to speak on his experience working with Audionamix on creating new duets with some of music's most legendary artists.

#### Barbra Streisand - Love Me Tender

Project Type: Vocal Extraction

Extracting Elvis' vocals from "Love Me Tender" allowed Barbra to record a new arrangement of the song with the isolated vocals, giving her the unique experience of a virtual duet with the King of Rock & Roll
